TECHNICAL SKILLS

Mobile: BLE, WiFi, UWB, NFC (CoreNFC on iOS), SwiftUI, HealthKit, AVFoundation, SFSpeechRecognizer, StoreKit 2, Instruments

Languages: Swift, JavaScript, Python, Kotlin, Java, Objective-C, C++

Architecture & Testing: Clean Architecture, MVVM, XCTest, Unit/UI Testing

DevOps & Processes: GitHub Actions, CI/CD, Bitrise, Fastlane, Trunk-Based Development, App Store (Submission, Release Management, Marketing), Agile/Scrum

Web & Backend: Node.js, Django, React, REST APIs, AWS Lambda, LLM APIs

WORK EXPERIENCE

Software Engineer, Early-Stage Startup

2025 - Present

Remote

- Building Bluetooth Low Energy (BLE) communication between a custom hardware device and native iOS and Android applications, issuing commands and receiving responses over GATT services.
- Oversee App Store submissions and handle end-to-end release management for the native iOS application.
- Shipped cross-platform Safari and Chrome extensions that surface coupon codes on most sites in under 2 seconds by calling a serverless machine-learning inference API with response caching.

Software Engineer II, Harman International

2023 - 2025

Remote

- Developed functionality for the Lowe's consumer-facing iOS application, serving millions of Lowe's customers maintaining a rating of 4.8+ stars on the App Store.
- Utilized XCTest within an Agile/Scrum team environment for robust unit and UI testing to ensure code reliability across the Lowe's application.
- Modernized a shared internal UI library utilized by hundreds of engineers across the organization.

Software Engineer II, ACV Auctions

2021 - 2023

Buffalo, NY, USA

- Led iOS development for remote interfacing with 1,000+ IoT devices, using BLE and WiFi for communication with async reconnection logic, built with SwiftUI and MVVM.
- Engineered a 4-channel audio and sensor data pipeline using AVFoundation, transforming raw hardware signals from vehicles into real-time visualizations and structuring collected data for transfer to backend systems for machine learning processing.
- Shipped a fail-safe over-the-air (OTA) firmware update system performed entirely by the app, and collaborated closely with firmware, hardware, and machine learning engineers on end-to-end decisions from the embedded device to the ML backend.
- Implemented GitHub Actions to run CI/CD pipelines, supporting efficient trunk-based development for the iOS app.

Software Engineer Intern, Classavo**2020***Remote*

- Built a live video conferencing solution supporting hundreds of professors and thousands of students for an EdTech startup. Wrote API routes on a Django backend and integrated Zoom and Amazon Chime using React on the frontend.

Assistant Web Application Developer, University at Buffalo**2017 - 2018***Buffalo, NY, USA*

- Developed new functionality for web applications within the university's IT department.
- Created a full-stack custom video playlist player using Node.js and the YouTube API, featured on the university's IT page to introduce incoming students to campus IT resources.
- Maintained a web app displaying available terminals on televisions in three campus libraries.

EDUCATION

Bachelor of Science in Computer Science**Graduated 2021***University at Buffalo, The State University of New York - Buffalo, NY, USA*

- Dean's List (Autumn 2016, Autumn 2017)
- International Admission Scholarship recipient

HONOURS AND AWARDS

- Winner, 5th Place: ACV Spring Hackathon (2022) for the project Triage.
- Judge: UB Hacking & CSE Demo Days (2021, 2022) selected to award the ACV Auctions prize.
- Winner: Best Use of Wegman's API - UB Hacking (2018) for the project Palatable.
- International Admission Scholarship: University at Buffalo, awarded over course of undergraduate study.
