Technical Skills

Mobile	BLE, WiFi, UWB, NFC (CoreNFC on iOS), SwiftUI, HealthKit, AVFoundation, SFSpeechRecognizer, StoreKit 2, Instruments
Languages	Swift, JavaScript, Python, Kotlin, Java, Objective-C, C++
Architecture	Clean Architecture, MVVM, XCTest, Unit/UI Testing
DevOps	GitHub Actions, CI/CD, Bitrise, Fastlane, Trunk-Based Development, App Store Release Management, Agile/Scrum
Web & Backend	Node.js, Django, React, REST APIs, AWS Lambda, LLM APIs

Work Experience

2025 – Present	Software Engineer - Early-Stage Startup <i>Remote</i> – Building Bluetooth Low Energy (BLE) communication between a custom hardware device and native iOS and Android applications, issuing commands and receiving responses over GATT services. – Oversee App Store submissions and handle end-to-end release management for the native iOS application. – Shipped cross-platform Safari and Chrome extensions surfacing coupon codes on most sites in under 2 seconds, via a serverless ML inference API with response caching.
2023 – 2025	Senior Software Engineer, Harman International <i>Remote</i> – Developed functionality for the Lowe's consumer-facing iOS application, serving millions of customers while maintaining a 4.8+ star App Store rating. – Used XCTest within an Agile/Scrum team for unit and UI testing to ensure code reliability across the Lowe's application. – Modernized a shared internal UI library used by hundreds of engineers across the organization.
2021 – 2023	Software Engineer II (Research & Development), ACV Auctions <i>Buffalo, NY, USA</i> – Led iOS development for remote interfacing with 1,000+ IoT devices using BLE and WiFi, with async reconnection logic, built with SwiftUI and MVVM. – Engineered a 4-channel audio and sensor data pipeline using AVFoundation, transforming raw vehicle hardware signals into real-time visualizations and structured data for ML processing. – Shipped a fail-safe over-the-air (OTA) firmware update system performed entirely by the app; collaborated with firmware, hardware, and ML engineers end-to-end. – Implemented GitHub Actions CI/CD pipelines supporting efficient trunk-based development for the iOS app.
2020	Software Engineer Intern, Classavo <i>Remote · EdTech startup</i> – Built a live video conferencing solution supporting hundreds of professors and thousands of students; wrote API routes on a Django backend and integrated Zoom and Amazon Chime using React.
2019	iOS Developer, Tryll <i>Remote · Early-stage startup</i> – Developed the iOS chat component for a travel recommendation app designed to scale to tens of thousands of users.
2017 – 2018	Assistant Web Application Developer, University at Buffalo

Buffalo, NY, USA

- Developed new functionality for web applications within the university's IT department, supporting a student body of 20,000+ undergraduates.
- Built a full-stack video playlist player (Node.js, YouTube API) featured on the university's IT page to introduce incoming students to campus IT resources.
- Maintained a web app displaying available terminals on televisions in three campus libraries.

Academic & Technical Projects

- 2022** **Triage**
- Built an iOS accessibility app enabling users with disabilities to make service requests via natural-language speech, auto-categorized in under 2 seconds. Stack: Swift, SwiftUI, SFSpeechRecognizer.
- 2018** **Playlist Remix**
- Shipped an Android app to the Play Store that constructs a playlist from a Spotify user's most recently added tracks across their library; received hundreds of downloads.
- 2015** **rpi-docker-dnsmasq** [<https://hub.docker.com/r/jasjeev4/rpi-dnsmasq/>]
- Built and maintained an open-source containerized DNSmasq configuration for Raspberry Pi, receiving over **10,000 downloads on DockerHub**. Stack: Docker, DNSmasq

Education

- Graduated 2021** **Bachelor of Science in Computer Science**
University at Buffalo, The State University of New York — Buffalo, NY, USA
- Dean's List (Autumn 2016, Autumn 2017)
 - International Admission Scholarship recipient

Honours & Awards

- 2022** Winner, 5th Place — ACV Spring Hackathon, project: Triage
- 2021 – 2022** Judge — UB Hacking & CSE Demo Days (2X), selected to award the ACV Auctions prize
- 2018** Winner — Best Use of Wegmans API, UB Hacking, project: Palatable

Professional Development

- Sep 2022** **360iDev iOS Developer Conference - sponsored by ACV Auctions**
Denver, CO, USA
- Attended sessions on the latest iOS development advances; networked with speakers and attendees.
